

Abstract:

In an observation system, comprising an observation camera (A, B, C, D), and an observation monitor unit (CU, M) coupled to the observation camera (A, B, C, D), upon the occurrence of a for observation purposes relevant event (doorbell DB) a plurality of preferably sub-sampled images including an image at a time of the event are recorded and a
5 sequence (E) formed by the plurality of images is repeatedly displayed.
